

EKANEM GODWIN

SOFTWARE ENGINEER

ekanemgodwins@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building real-time AI applications, backend services, data pipelines, and cloud-connected systems. Built voice AI agents, computer-vision systems, reproducible AI evaluation workflows, and operational data infrastructure using Python and modern cloud tooling. Electrical and Electronics Engineering graduate with a 4.80/5.00 CGPA, combining strong systems thinking with practical software delivery across AI, backend, and data-intensive environments.

TECHNICAL SKILLS

Languages & Data: Python, Scala, SQL, Bash, Pandas, NumPy

Backend & Databases: FastAPI, Django, Flask, PostgreSQL, MongoDB

AI/ML: TensorFlow, PyTorch, OpenCV, LangChain/LangGraph, RAG

Cloud, DevOps & Data Systems: Docker, Kubernetes, AWS, GCP, Git, CI/CD, Kafka, Airflow, Spark, MQTT

WORK EXPERIENCE

INSPIRED TECHNOLOGIES	<i>Abuja</i>
Software Engineer	Dec 2025 - Jun 2026
- Enabled context-aware voice interactions during live calls by engineering a low-latency AI agent pipeline with Agno and LiveKit, integrating tool calling, persistent memory, and real-time reasoning. - Connected field devices to cloud-based services by building backend systems for device-data processing, database operations, event logging, asynchronous jobs, and system communication. - Enabled real-time security monitoring and remote service deployment by integrating Roboflow-based object detection and deploying containerized AI/backend workloads with MQTT, Docker, Kubernetes, AWS, and GCP.	
AFTER QUERY	<i>US (Remote)</i>
Software Engineer	Oct 2025 - May 2026
- Strengthened AI-system evaluation by designing deterministic command-line engineering tasks covering debugging, build automation, data processing, and environment configuration. - Standardized reproducible execution across AI evaluation workflows by developing Docker-based environments and applying CI/CD principles for cross-platform consistency. - Improved reliability of AI training and evaluation pipelines by authoring test suites, validation logic, and technical documentation for complex multi-step engineering tasks.	
NATIONAL CENTER FOR AI AND ROBOTICS	<i>Abuja</i>
AI/ML Intern	Mar 2024 - Sep 2024
- Automated blood-smear image analysis for malaria screening by developing a real-time diagnostic system with TensorFlow and OpenCV, reducing dependence on manual microscopy review. - Enabled responsive gesture recognition without cloud connectivity by engineering a lightweight offline inference pipeline for embedded devices and optimizing edge execution. - Automated vendor-document analysis and intelligent surveillance workflows by building a RAG-based processing application and integrating embedded image capture with facial-recognition and object-classification models.	
TRANSMISSION COMPANY OF NIGERIA	<i>Abuja</i>
Data Engineer Intern	Jul 2023 - Sep 2023
- Enabled continuous analysis of grid operating parameters by engineering Kafka-based ingestion pipelines for load-distribution and transformer data across service zones. - Converted unstructured field logs into analysis-ready datasets with Apache Spark and Pandas, supporting predictive-maintenance and operational-trend analysis. - Strengthened reliability assessments by identifying anomalies in grid data and orchestrating validated ETL workflows with Apache Airflow.	

EDUCATION & CERTIFICATIONS

COVENANT UNIVERSITY - B.Eng. Electrical and Electronics Engineering	2020 - 2025
CGPA: 4.80/5.00	<i>Ota, Ogun</i>
Certifications: IBM Data Engineering IBM Python for Data Science, AI & Development DeepLearning.AI Deep Learning
